

Biostatistics is a branch of statistics (applied) that focuses on the development and use of statistical methods that address issues and answers to questions raised in health, medicine, and genetics and human biology. Graduates will be able to apply for teaching and research at universities and research centers. The history of biostatistics in our country dates back to the middle of the 20th century, while the first biostatistics department in Iran and the Tehran University School of Public Health in 1965 was founded by Dr. Nahapatian.

At that time, the Department of Biostatistics began to provide education and research in the field of Biostatistics by providing a Bachelor's degree in Biostatistics And at the same time presented to the entire University of Tehran educational services and research consultancy. The above-mentioned biostatistics department has been integrated with the Department of Epidemiology of the University in 1972 and has since continued admitting and training to undergraduate students and in recent years in Ph.D.

Dr. Homayoun Sadeghi bazarghani is the director of the Department of Health and Traffic.
